I take ambiguous ideas and turn them into clear, buildable products.

- **Shape the problem** through customer conversations, research, experience and product best practice.
- **Define the product** by exploring options and making the key product and technical decisions with the team.
- **Make ideas tangible** through prototypes and hands-on technical exploration when that helps resolve uncertainty.

I work closely with designers, engineers and stakeholders to turn that thinking into products that people can actually use.

I take responsibility for delivery as part of the team. I have shipped products as a founder, consultant and engineer, and I use TDD, pair and mob programming and small increments to keep scope realistic and quality high.

Experience

2022 - 2025: ToTravelTo.com, Founder + Technical Product Manager

- Set the direction for an AI-powered sustainable travel planner, testing the case for moving journeys from plane to train.
- Led a team of up to 20. Enjoyed pair and mob programming, covering platform design, development and early user research.
- Took the product from MVP to beta, writing acceptance criteria around real user needs and cutting scope to keep releases small.

Spring 2025: Boquercom, Product Lead

- Led a four-person team building a community tool that transcribes and translates Spanish to English for live events.
- Shaped and built the MVP around the Whisper API, deployed on Heroku and AWS.

2019 - present: alter.is, Director + Delivery Lead

- Turned client business goals into roadmaps, plans and timelines across startup and scale-up projects.
- Raised team velocity by introducing story refinement and clearer acceptance criteria.
- Led API development and recruitment for an automotive spin-out, coordinated several development teams and advised on technical product strategy.
- Acted as the escalation point for technical and delivery risk, including a security audit of a codebase for a German automotive company.
- Continuous experimentation and research into the latest AI, MCP, RAG, Agentification techniques. Ideation and prototyping of ideas.

2006 - 2019: founder, CTO + senior engineer

- Built and iterated on lean product experiments with real users, including a Twitter growth tool accepted into the UP Accelerator.
- Worked with product owners on scope and planning, led small teams and mentored junior engineers at Thales, Teleca, Atos, Liquid Bronze, CTI Digital and On The Beach.

Education and community

- BSc (Hons) Computer Science, University of Manchester.
- Founded MCR Startups & Founders' Assembly, mentoring 50+ founders, and rebooted the Málaga Ruby community.
